
trying new rainlendar

Posted by agrippa - 2006/12/14 14:45

I have the old rainlendar installed on my system. I am very happy with it, but would love to try the new rainlendar2. If I download the new version and install it in a different folder from the old version, will there be any conflicts (for instance, in the "documents and settings/user/application" folders)? If I decided to stick with the old version for some reason, would I be able to uninstall the new version without damaging the old installation?

I'm sorry if these questions have already been addressed in the forums. I did a search and was unable to find any info on these questions specifically.

Thanks,
agrippa

Rainlendar2 doesn't overwrite or use any of the same files that the previous version uses so it doesn't affect the old installation.
