## Rainlendar 2.8 BETA build 97

Posted by Rainy - 2010/10/24 05:08

---

Build 97 can be downloaded from here:

Windows (32-bit): Rainlendar-2.8.b97-32bit.zip  
Windows (64-bit): Rainlendar-2.8.b97-64bit.zip  
Linux TAR (32-bit): Rainlendar-2.8.b97-i386.tar.bz2  
Linux DEB (32-bit): rainlendar2-pro\_2.8.b97-1\_i386.deb  
Linux TAR (64-bit): Rainlendar-2.8.b97-amd64.tar.bz2  
Linux DEB (64-bit): rainlendar2-pro\_2.8.b97-1\_amd64.deb  
Mac OS X (Intel): Rainlendar-2.8.b97.dmg

MD5SUMS-b97

This is beta version! It has not been tested.

Changes:

- o Month items were not aligned correctly due to the changes made in the previous build. Fixed.
- o Moved the buttons to the left in the options dialog to make it more netbook friendly.
- o Added the missing "linkcolor" attribute for text items.
- o Added timezone and label support for the analog clock in the Chromophore skin.
- o Recurring events with until date could not always be updated to Google Calendar. Fixed.
- o The FREE layout in calendar can now show also weekdays.
- o Lua scripts can be run on window initialization and redraw (see Rainlendar\_SetEventHandler).
- o Mouse events didn't work with FREE calendar layout. The must now define width and height which contains all the day positions for this to work.
- o Fixed a crash which happened if the skin didn't have a tooltip and todo list was set to custom sort order.
- o Calendar file monitoring now checks also changes in the file modification date.
- o Added a small delay before the components are reloaded after changes are detected so that sequential updates cause just one operation.
- o The mouse cursor changes to a hand when it is over a button.

The file monitoring causes problems on Linux. I updated the build so download it again and reinstall.

When i try to run b97 (Windows 32bits) for first time in a clean folder, Rainlendar says "libcurl.dll not found" I copy from previous beta and now run without problems.

I'm checking now the Circular calendar. Thanks for the changes in FREE layout.

Downloaded and installed. Everything seems to work fine so far.

The new Options layout is really excellent (Laptop).

Thanks for the update.

Working great. Windows 7, Rainlendar pro version. Thanks for the updates. This program keeps getting better, and I've come to rely on it heavily for work and personal calendar. Thanks!

Sorry, I meant never mind about something I had written and deleted but couldn't delete my entire post. I wasn't talking about any issue you may have raised.

ngoonee@ngoonee-laptop ~ % rainlendar

rainlendar: error while loading shared libraries: libjpeg.so.62: cannot open shared object file: No such file or directory

Previous beta (b96) worked fine, no change in libjpeg version etc.

ngoonee@ngoonee-laptop ~ % ls /usr/lib/ | grep libjpeg.so

libjpeg.so@

libjpeg.so.8@

libjpeg.so.8.0.2\*

EDIT: I'm on 64-bit, using the .tar.bz2. Arch Linux.

The previous build didn't seem have any dependency to the libjpeg. I'll check what has changed.

Options - Add years to birthdays and anniversaries, doesnt work anymore.

/Stefan

Edit - using google calendar

Options - Add years to birthdays and anniversaries, doesnt work anymore.

Hmmm... works fine here. Is the category set correctly for the event?

Hi Thanks for the good web site with great help. I have recently moved to Fedora 14 and got the black screens which some people reported. I am happy to report that this build works perfectly with Fedora 14. Hope this helps someone looking for help.

Hi Rainy!

Of course it is working fine if I only set the birthdate right in the "starttime box" !

It was a long time since I made a Birthday reminder so I forgot that detail, thanks for wakeing me up.

/Stefan
