
Auto resizing of Event & ToDo windows

Posted by andygrunt - 2006/12/15 09:15

I run Rainlendar on my laptop which only allows me a desktop res' of 1024x768. This is fine except I sometimes get the bottoms of either the ToDo or Events windows disappearing under the Windows taskbar and off the bottom of the screen.

I can manually tell Rainlendar to make the windows shorter but that's a pain as the windows size changes regularly depending on the number of events/ToDo's. So, it would be much better if Rainlendar could automatically alter the windows size on the fly so it stopped the ends of the windows disappearing.

Thanks.

I'm not sure if my layout implementation can handle that kind of situations.
