## Different calendar, new termins

Posted by dehein - 2010/10/27 05:57

---

If somebody has, different calendars.

Week view just included with my university and a normal calendar in month view.

When i click into my weekview i want to create a event in Weekview and not in my monthly calendar as default. Without having to click into which calendar i want to add the event.

I trying what you say with my calendars (i'm using the latest beta version) and when you add an event, automatically select the last calendar used (and included) in that view.

On the options in active skins, do you have the item "included calendars"?

You need something like this:

WEEKVIEW- INCLUDED: University, WeekViewCalendar EXCLUDED: None

MONTHVIEW- INCLUDED: Default, MonthViewCalendar EXCLUDED: None

And don't select a calendar outside the included one.
