
Overlapping event icons

Posted by msl23 - 2006/12/15 14:26

I can't get different event icons to display next to each other. They always overlap. I've put them into same layers and I've even tried copy/pasting the lines from other skin that has it working. No luck yet.

Any thoughts what could cause this? Is icon resolution relevant?

Try reducing the size of your icons. The icons must fit inside the rectangle that is allocated for the day.
