
PC Speaker as alarm

Posted by zes - 2010/11/10 03:09

Hi,

It would be very handy if there were support for PC speaker as an alarm. Since i use Rainlendar on a pc that has no speakers attached, and i often need to switch between computers i miss the alarms that i've set when i'm on a different computer. Just a beep will do :-)

Regards

The alarm file can be executable too so you can change it to a beep.exe or something similar which makes a sound from the PC speaker.

Aha nice feature, will try that later.

Thanks
