
Twitter

Posted by blitzkrieg - 2010/12/09 23:38

Hello,

I'm not even sure if that's possible as I'm really not a coder but I was wondering if it was possible to develop a little gadget that would display the equivalent of my twitter home timeline (where I see everything people I follow posted) and limit it to the 5 most recent things in there or something like that. I was really thinking of something like a rss feed-like feature (and I saw there is a RSS addon in the scription subforum but I really have no idea if I could get my twitter in that or how.. google didn't really help me on there).

Thx for the help (or sorry if my question have been answered already).

Blitzkrieg

I'm not even sure if that's possible as I'm really not a coder but I was wondering if it was possible to develop a little gadget that would display the equivalent of my twitter home timeline (where I see everything people I follow posted) and limit it to the 5 most recent things in there or something like that. I was really thinking of something like a rss feed-like feature (and I saw there is a RSS addon in the scription subforum but I really have no idea if I could get my twitter in that or how.. google didn't really help me on there).

- 1) as you saw, download the widget addon (if you didn't do it) from http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=6&id=6164 and install it.
- 2) Right click in a window -> Options -> Skins -> Advanced >>> -> Open Shadow4 on the left side -> select RSS -> click on the right arrow.
- 3) Now, its time to change the RSS. Open your Twitter page and seach for the RSS icon (an orange one). In Firefox is on the right side of the address/location bar. The RSS will be something like <http://twitter.com/favorites/.rss> for Favorites and http://twitter.com/statuses/user_timeline/.rss for your timeline.
- 4) Select "Shadow4 - RSS" in the right side of the dialog and click in "options..."
- 5) On the top side, look for the item "RSS Location" and paste the previous url. Click OK and wait to refresh. Done!

This works for Favorites and for your own tweets. Sorry if i can't help you with a RSS for the following. I don't have a Twitter account.

When I use <http://twitter.com/favorites/user.rss> I get a parsing failed message and even when I check the feed in firefox it doesn't show anything. I'm not sure if it should show anything but I dont see my own tweets or the ones of the people I follow.

And about http://twitter.com/statuses/user_timeline/user.rss, I only see my own tweets...

So both are kinda useless to me, I mostly wanted it so I wouldnt have to go on twitter so see people updates, like I use rainlendar not to have to check my google calendar.

If you get any idea let me know.

I will use Paula Abdul's twitter (from Got Talent, but just as an example).

Move your mouse over this link:

<http://www.rainlendar.net/cms/images/fbfiles/images/picture.PNG>

You will find a link to http://twitter.com/statuses/user_timeline/27750488.rss
In this case, 27750488 is the user number for Paula Abdul. You have yours.

Then, for the favorites, use twitter.com/favorites/27750488.rss

UPDATE: If you see in the link user.rss then i have no idea. Could you see your Twitter without login? Maybe if you have a private account you won't see from outside.

D'oh! sorry :silly:

Try without login. The RSS could only work in a public twitter.
Is the last thing i know...

Maybe someone else can help you.

Yeah that's probably the problem. The page/info I want to see are not public and the only way to see them would be to follow all the people I follow (so it's like a mix of a lot of rss feeds) or find a way to login with twitter and get the information after that.
