## Action on ToDo List Double-Click

Posted by phuzE - 2010/12/12 22:36

---

I was thinking a really useful feature might be to allow the user to specify an action to perform on a double-click of a ToDo list item. For instance, when creating a ToDo event, the user can set the double-click of that item to open their browser to their e-mail page, or any full path of an executable on their system.

Oh I did not know that!

Now I read through the help file but I'm not sure how this works exactly...say I wanted to open Notepad, I could put the full path in the URL? And then open it how - on double click? Wouldn't that just open the task for editing?
