minimize them? hide them? with one click? one shortcut?

make them always on top?

I'm not really sure what your question is...

hide for example.

I can right click the tray icon then choose windows then choose hide for each of them. quite a number of right clicks and left clicks to do that.

How can I hide all of them, in one click or shortcut?

And how can I stop that "Google Error" that comes when I have taken the network cable out?

In the latest beta, if you right click the tray icon, on Windows you have the options to check/uncheck window and Show or Hide all the windows.

well, ok

how about "always on top"..

I notice it's transparent, so I thought maybe if I moved a notepad window over it, it wouldn't hide the calendar. But it does. How about a calendar that stays on top and is transparent, so I could see the calendar, and whatever else i'm using in that area.

You have several options in Right click -> Options -> General:

-> Set the position to "Always on Top"

- 
- > Check "Click through (hold Shift-key down to deactivate)"
  - > Change the normal opacity
  - > Change the mouse over opacity
-

ok i'll try that.

Also, I get a load of errors after a while of having no network cable in there.

If you don't want to see the errors you can enable the "Suppress errors" option for the calendar in Options->Calendars.
