## Rainlendar 2.8 BETA build 100

Posted by Rainy - 2010/12/19 05:51

---

Build 100 can be downloaded from here:

Windows (32-bit): Rainlendar-2.8.b100-32bit.zip  
Windows (64-bit): Rainlendar-2.8.b100-64bit.zip  
Linux TAR (32-bit): Rainlendar-2.8.b100-i386.tar.bz2  
Linux DEB (32-bit): rainlendar2-pro\_2.8.b100-1\_i386.deb  
Linux TAR (64-bit): Rainlendar-2.8.b100-amd64.tar.bz2  
Linux DEB (64-bit): rainlendar2-pro\_2.8.b100-1\_amd64.deb  
Mac OS X (Intel): Rainlendar-2.8.b100.dmg

MD5SUMS-b100

This is beta version! It has not been tested.

Languages:

I'm considering including some of the language files with Rainlendar to make it easier for non-English speaking people to start to use the calendar. There next version will be release quite soon so there shouldn't be much changes to the texts anymore. If you want to help and add the missing texts to your native language file your can download the latest pot file from here: rainlendar2.pot.

Note that if you use the above pot file to update a language file please do not upload it to the Rainlendar's language page yet but instead attach the rainlendar2.po file to this thread.

The offer for a free license for translation still applies. After you have added the missing texts and attached the file to here just send the link to your post in email to Rainlendar's support address. Remember to include the licensee information too (name and email). If you already have a license you can also give the new one as a christmas present so someone :-).

Changes:

- o Some of the languages are now bundled with Rainlendar so no separate installation is required.
- o Added week numbers to the week views in Shadow4 and Chromophore skins.
- o Added url buttons for the schedule views.
- o Changed the loop alarm sound to be defined as number of seconds instead looping forever.
- o The today's item and header in the event list can be customized with "todayheader" and "todayitem".
- o Getting and setting global variables didn't work from lua scripts. Fixed.
- o "Try direct connection if proxy fails" didn't work in Google calendar if the "Suppress errors" was enabled. Fixed.
- o Removing start or due date from an Outlook task didn't work. Fixed.
- o It was still possible to define the start date after due date for the tasks if just one of them was enabled. Fixed.
- o New events created from the month view's context menu had today's date instead the selected one. Fixed.
- o Month view showed some all day events incorrectly. Fixed.
- o Upgraded to wxWidgets 2.8.11.

---

---

Note that if you use the above pot file to update a language file please do not upload it to the Rainlendar's language page yet but instead attach the rainlendar2.po file to this thread.

Here's the Spanish .po update. I'm not the best translator, so i hope that someone else will check this file and correct if there is something wrong. [http://www.rainlendar.net/cms/images/fbfiles/files/rainlendar2\\_\\_\\_Spanish.zip](http://www.rainlendar.net/cms/images/fbfiles/files/rainlendar2___Spanish.zip)

EDIT: These 2 items are wrong

POT: Loop the alarm sound (secs) ---- RAINLENDAR2: Loop the alarm sound

POT: Time offset (mins) ---- RAINLENDAR2: Time offset

---

"(Due in now)"

=====

## Re:Rainlendar 2.8 BETA build 100

Posted by evanade - 2010/12/19 12:26

---

I forgot to see the refrence just focus on translating strings. :blush:

Missing strings:

"File full rows"

"File height"

"File width"

"World time format"

"World time location"

"World time timezone"

Thank you Jorge\_Luis!!

I've completed it.

PS.

But it doesn't work for b100 now, right?

I overwrite the old .po & .mo files in locale folder then refresh, the strings were not localized yet.

[http://www.rainlendar.net/cms/images/fbfiles/files/zh\\_TW.zip](http://www.rainlendar.net/cms/images/fbfiles/files/zh_TW.zip)

## Re:Rainlendar 2.8 BETA build 100

Posted by Rainy - 2010/12/19 14:13

---

I added the missing strings and some additional comments to the pot file. The "(Due in now)" should probably just say "(Due now)" so I changed that too.

If you want to try the translation make sure you don't have the old language file in the settings folder or otherwise it will be used instead the one in the program folder (Hmmm... I wonder if this is going to cause problems...).

I've made the changes.

I'm thinking out loud...

For new users, you probably need to clear the Languages Download page;  
and for old users... how about just "forget" the locale folder in user folder on startup/refresh?

You will need to establish only one localization for each language.

It's not easy to put all the languages inside the app folder.

What will happen with the language addons? Will be installed in the app folder?

[http://www.rainlendar.net/cms/images/fbfiles/files/rainlendar2\\_\\_Spanish\\_\\_v2.zip](http://www.rainlendar.net/cms/images/fbfiles/files/rainlendar2__Spanish__v2.zip)

The new version is Shadow4 version 1.7. The old Widgets can't be applied since they are for Shadow4 1.6. Is there a new version of Widgets that supports version 1.7?

I miss Weather, Countdown, and Moonphase.

Thanks for you support,  
Grouch

Just open the addon file with zip software and edit the "skin" with notepad, just change "1.6" to "1.7" then you can use it.

---

I attached an newer version of the german translation. [http://www.rainlendar.net/cms/images/fbfiles/files/de\\_DE.zip](http://www.rainlendar.net/cms/images/fbfiles/files/de_DE.zip)

Mssing in the .pot-File:"Day view date format""Show weekdays"

I translated these strings, too - but they are missing in your .pot file.

There is some glitch in the Chromophore Day view, if the all day string is to long:  
[http://www.rainlendar.net/cms/images/fbfiles/images/Chromophore\\_\\_Day\\_view.png](http://www.rainlendar.net/cms/images/fbfiles/images/Chromophore__Day_view.png)

Mssing in the .pot-File:  
"Day view date format"  
"Show weekdays"

---

I added these to the pot file.

There is some glitch in the Chromophore Day view, if the all day string is too long:  
The text gets wrapped automatically if it doesn't fit. You could try changing the translation so that the text is hyphenated:  
"ganz-ntägig"

---

## Re:Rainlendar 2.8 BETA build 100

Posted by Jorge\_Luis - 2010/12/21 13:30

---

es-ES VERSION 3 ready.

I upload the file to the Language page because with each missing string this post is getting bigger and bigger, and (possibly) many of them could be losted in the "jungle" of replies...

Now, the es-ES version is 110% complete, awesome!!! :woohoo: :lol:

---

I would recommend to do the same until the pot file is complete.

---

=====

## Re:Rainlendar 2.8 BETA build 100

Posted by evanade - 2010/12/22 06:01

---

Find another missing string...

in categories when creat new events.....

---

=====

## Re:Rainlendar 2.8 BETA build 100

Posted by Rainy - 2010/12/22 11:38

---

Added the "" to the pot file.

I also changed the webpage so that the translations for the beta are shown in a separate table if you click the show history button for the language. So, you can now upload the translation directly to the language page instead attaching them here.

---

=====

## Re:Rainlendar 2.8 BETA build 100

Posted by Jorge\_Luis - 2010/12/22 12:06

Traditional\_Chinese is normal

It's weird.... I can't open your Spanish file with 7zip, maybe lost something when uploading, try to reupload?

---

=====

## Re:Rainlendar 2.8 BETA build 100

Posted by Jorge\_Luis - 2010/12/22 12:47

---

I don't know what's happening.

I thought it was "Project-Id-Version: Rainlendar 2.8\n" instead of "Project-Id-Version: Rainlendar 2.8 b100\n". But even that didn't work.

I only upload the .po file. The .r2lang is generated automatically, in some place between the upload and the download. [http://www.rainlendar.net/cms/images/fbfiles/files/rainlendar2\\_\\_\\_Spanish\\_\\_\\_v4.zip](http://www.rainlendar.net/cms/images/fbfiles/files/rainlendar2___Spanish___v4.zip)

---

=====

## Re:Rainlendar 2.8 BETA build 100

---

The size of the r2lang file hit a 64kb limit and wasn't stored fully. It should work now.

=====

## Re:Rainlendar 2.8 BETA build 100

Posted by Leif - 2010/12/22 17:04

---

I'm having great problems with the 'time item duration' both in the day and the week view. It was OK to start with but when I tried to change to 30 mins all went haywire. Now the week and day views show up with 1 minute duration instead and when I go back to check my settings, it does not say 30 minutes, or 60 minutes; it just says nothing at all. Am I doing something wrong here?

I've been using Chromophore and Shadow4.

---

Hi,  
Here is the Serbian file.  
<http://www.rainlendar.net/cms/images/fbfiles/files/Serbian.zip>  
Regards.

---

## Re:Rainlendar 2.8 BETA build 100

Posted by linuxusr - 2010/12/31 10:29

---

hello,

i'm using this beta version of rainlendar on linux ubuntu 10.10 (64 bit). i can see the calendar on the dektop, but i cannot change the settings. for example i cannot change the language on "options..." (the language file is installed and i can see it on the menu). and settings directly on the rainlendar2.ini are impossible. if i refresh rainlendar, the old settings are written on the rainlendar2.ini file.

is there a mistake of me?

---

## Re:Rainlendar 2.8 BETA build 100

Posted by Rainy - 2011/01/02 09:51

---

If you edit the rainlendar2.ini file manually you must quit Rainlendar first. Does the problem affect all settings (e.g. is the window position reset if you refresh the calendar)? Do you get any errors when you start Rainlendar?

---

## Re:Rainlendar 2.8 BETA build 100

Posted by linuxusr - 2011/01/02 12:29

---

Sorry, i have found the mistake.  
Rainlendar is working now!!

---

## Re:Rainlendar 2.8 BETA build 100

Posted by ozzii - 2011/01/02 14:40

---

Question:  
Do I need to continue to update the "regular" pot file or this (beta 100) is enough.  
I ask this because I saw that a new "regular" pot translation file is available.

---

## Re:Rainlendar 2.8 BETA build 100

---

Posted by Rainy - 2011/01/04 12:56

---

The pot file which is linked from the language page is for the 2.7 so it can be ignored for now. I'll replace it with the b100 version once the 2.8 is released.

=====

## Re:Rainlendar 2.8 BETA build 100

Posted by ozzii - 2011/01/04 16:25

---

Cool. So just to update (for the moment) the "beta" pot files.  
great.
