
Possible? Reduce cache by synching fewer entries?

Posted by Sch01ar - 2010/12/19 07:28

Hi - I'm back using Rainlendar again, on ubuntu 10.04. There really is nothing like it! My question might have been answered before; if so I don't see it.

I use RL purely to synch RTM and Google calendar feeds so I can see my diary when I'm offline. Is there a way to reduce the scope of what RL is looking for - say, a month past and future - so it can load faster and download faster? I notice in my events manager that the cache goes back years, and when I reload it replaces them, even if I've deleted them via RL's manager.

Thanks in advance.

At the moment it's not possible but it's a good idea. I'll add this to my backlog.
