
Which phones can sync with Rainlendar?

Posted by Undersky - 2006/12/18 09:42

I got my phone stolen a couple of weeks ago and need to buy a new one. Since I use Rainlendar for all of my calendar planning, it would be nice to have a phone that I know will sync in some way with Rainlendar. So, what about it? Which phones can be synced with Rainlendar in some way?

Basically any phone that would support sync'ing from a ICAL data file would work

MyPhoneExplorer - <http://www.fjsoft.at/> - syncs Rainlendar2 very elegantly with SonyEricsson phones.

You might also be able to use FinchSync to sync the ics files with a Pocket PC or SmartPhone (I have not tested this though).
