## Support for SyncML / Funambol

Posted by Plop - 2011/01/02 10:42

---

Hello,

I am new here and I like Rainlendar very much.

But I would appreciate if Rainlendar could handle SyncML, because I want to synchronize my calendar with a Funambol server (which I already use for my mobile phone). Isn't it possible to integrate this feature into Rainlendar?

greetz

There are no plans for SyncML support but you probably can use the Google Calendar to sync your events (i.e. use Rainlendar to access the events in Google and then sync that with Funambol).

Hm, I don't want to use Google but my own Server instead. Pity, I'll probably have to look for something else.  
Thanks
