
New categories from \"new event\" window

Posted by JSimR - 2011/01/21 10:23

I open a "new event" window.

I want add a new category for this event, I have to go to Options to create it and to return of "new event" window. It would be good to can add categories from "new event" window itself.

=====

You mean that if a custom category name is written in the field Rainlendar would automatically add it to the default category list. I guess it could do that. I'll think about it.
