
A better manner to select month in date picker

Posted by JSimR - 2011/01/21 10:31

The actual select box to select the month is ugly and uncomfortable.
It would be better (and much more usable) a control like the year:

I'm not sure how it's in Linux but at least in Windows the calendar control is provided by the operating system so it's not really possible to modify it (except by reimplementing it totally from scratch).

Ok, then it's a limitation of WxWidgets.
