
Audible alarm not working

Posted by dontex - 2011/01/24 09:18

The alarm panel comes up but there is usually no sound. When it does sound the sound file is not looped even though the alarm loop option is checked. This worked fine until the recent update to version 2.8 b101

What do you have in the Options->Advanced->Loop the alarm sound? In build 101 you need to define the number of seconds the alarm will loop.

I have 1. I had 0 at first then changed it last week as I thought it might be a problem. That did not fix the problem.

Do you mean that you changed it back to 0 and it still doesn't work? What operating system you are using?

I installed the new version of Rainlendar and the sound stopped working. When I checked the options "Loop the Alarm Sound" was set to zero. I tried setting it to "1" and still no sound. I am using Windows 7 Ultimate 64 bit version.

Try increasing the value. One second might not be enough time to initialize the audio system and play the sound. Verify also that the audio file is defined in Options->Advanced->Default alarm file and that you are not overwriting it e.g. with the event templates.

I increased the value to 10 seconds and sound played for 10 seconds and then stopped. I have it set at 50,000 and it seems to work okay for me but I don't think that is the way you intended it to work.
