## Rainlendar 2.9 BETA build 102

Posted by Rainy - 2011/01/29 07:35

---

Build 102 can be downloaded from here:

Windows (32-bit): Rainlendar-2.9.b102-32bit.zip  
Windows (64-bit): Rainlendar-2.9.b102-64bit.zip  
Linux TAR (32-bit): Rainlendar-2.9.b102-i386.tar.bz2  
Linux DEB (32-bit): rainlendar2-pro\_2.9.b102-1\_i386.deb  
Linux TAR (64-bit): Rainlendar-2.9.b102-amd64.tar.bz2  
Linux DEB (64-bit): rainlendar2-pro\_2.9.b102-1\_amd64.deb  
Mac OS X (Intel): Rainlendar-2.9.b102.dmg

MD5SUMS-b102

This is beta version! It has not been tested.

Changes:

- o Added iCal support for Mac.
- o The language selection for the translate widget didn't work.
- o Some selection settings couldn't be made if some other language but English was used.
- o category wasn't shown correctly in the Shadow4 skin.
- o Outlook recurring events sometimes were shown on incorrect day if the start day was start or end of the month.
- o Added a workaround for Outlook events which didn't set the recurrence end date correctly.
- o The CSV plugin failed to import dates where year was defined with two digits.
- o The recurrence controls were incorrectly updated also when the end date was changed.
- o Rainlendar crashed if previously deleted event was deleted again.
- o The calendar wasn't chosen from the template unless "Allow multiple calendars" was enabled.
- o Added new option for "Combine icons in the calendar" not to show any icons.
- o It's not anymore possible to delete read only items in the Manager dialog.

And where can I find the Languages-addon?

You can find the Languages-addon file in the "Download Languages" section here in the forum (check in the upper side). Below all localizations files there is the section "Language Pack for Shadow4".

---

There is a small bug:  
Can't set Alarm-sound from Event-Dialog.  
Event's Alarm-sound is always use the Default-sound.

Oh! I'm sorry, I think I know why.  
It happened in my "Google" and "Outlook" rather than the "Default",  
It Should be because "Unregistered".

Yes, it's not possible to define a custom audio for non-local events. I should disable that feature for other calendars...

---

---

I have updated from version 2.8beta95 and now I can't see the Shadow4 widgets (countdown, moonphase, photos....). I have downloaded the file from: [www.rainlendar.net/download/Shadow4-Widgets.r2skin-addon](http://www.rainlendar.net/download/Shadow4-Widgets.r2skin-addon) but still not works.

---

It was probably my mistake :unsure: . As It worked in a new computer I deleted all files and reinstall and now It works. Sorry for the inconvenience.

---

The Mac version reports the wrong version when you click information in Finder. The info.plist in the app bundle is set to 2.7 (probably wrong for a long time now).

How about a 64bit version of Rainlendar for Mac?

---

## Re:Rainlendar 2.9 BETA build 102

---

I'll need to add the info.plist to my "things to fix before a release"-list.

Are there some benefits of a 64 bit build on Mac?

---

Rainy,

---

There's a bug in the Mac version where the tray icon doesn't show in the bar up top, regardless which skin is chosen.

Also, I've noticed this version crashes more regularly than the last.

Sorry, Chrome hiccuped and I ended up with multiple posts and I don't see any way to delete them from the edit screen :(

The Cocoa helper component seems to have some issues. I'll check that.

The crashes are related to the network library. I guess I have to start including a newer version of it with Rainlendar than using the one which comes with the OS.

## Re:Rainlendar 2.9 BETA build 102

Posted by AWDriver - 2011/02/05 10:19

Even after downgrading to the current stable version, 2.8.1, still no go on the tray icon at the top, even if remove and re-add tray icon and refresh Rainlendar in between. This is only error in Console when loading the program:

2/5/11 10:18:30 AM Rainlendar2-Pro Cannot find executable for CFBundle 0x17083500 (not loaded)

=====

## Re:Rainlendar 2.9 BETA build 102

Posted by Rainy - 2011/02/05 10:43

Download the 2.8.1 again. The missing bundle is included now.

As for any benefit of a Mac 64bit version, no there isn't any, just something nice to have but just for having it... :)

I'm testing Arch Linux to decide if I install this distro, instead of Ubuntu, in my desktop PC.  
I'm trying to install Rainlendar but there isn't tar packages of pro versions! Only deb, why?

I've found the PRO version of this beta in AUR repositories. ;)
