
Alarm box stays in the way when editing

Posted by andygrunt - 2011/02/06 16:10

If an alarm goes off and I double click the text to bring up the editing window (in order to change something), the alarm box stays in the way, on top of the editing window. My suggestion is that it should disappear or, at least, drop behind the edit window.

You can make the alarm window not to be topmost if you disable the Options->Advanced->Keep alarm always on top.
