Category under different languages

Posted by atb - 2011/02/23 06:13

_____

It seems that if the language is not English and the category information of the events and tasks will be saved in the localized language. So if the language is switched into English, the events and tasks will loss their vetegory information because they can not be translated back into English.

So I am wondering whether the category information could be stored in English no matter what the language of the program is. Then there will be no such problem.

_____

Isn't that what Options | Advanced | Store English category names is all about?
