
New Event - Click \"OK\" then \"Discard\"?

Posted by kenoodle - 2011/02/24 12:12

Clicking "OK" to add a New Event enters it correctly, but then to dismiss the dialog window I must click "Save" "Discard" or "Cancel". Clicking "Save" adds the event a second time. "Cancel" does not do anything. "Discard" does dismiss the window and leaves the newly added event intact, without adding it a second time.

Mac OS 10.6.6

The event dialog shouldn't remain open when you click OK. I noticed that this can sometimes happen if you have the "Keep editor open until writing succeeds" setting enabled. I'll fix this.
