
Win32 Tooltip: Displayed under Rainlendar

Posted by toblo - 2006/12/26 06:20

If the Position is set to Normal or On Bottom, the tooltip is displayed under Rainlendar.

<http://toblo.ml.mailcan.com/images%20for%20forums/rainlendar%20tooltip%20window%20order%20issue.PNG>

If Position is set to On Top or On Desktop, it's displayed properly.

Using 2.0.1 (b28) and (b31).

I'm not able to reproduce this. Does it happen always and also in the event and todo lists?

I'm having the same problem; yes it happens even on events list. Rainlendar is set to desktop mode.

Running Rainlendar version 2.0.2.0 on win 2k sp4.

It happens with the taskbar, too.

Does the problem with happen only when the transparency is set to Native? Or also with Copy and Region settings?

Re:Win32 Tooltip: Displayed under Rainlendar

Posted by perceptor - 2007/01/08 17:12

With "copy" option the tooltip works perfectly, while with "region" option there isn't the trasparency effect (see bottom image).

Then I tried to switch to "native" again, and the problem vanished! :woohoo:

Anyway the taskbar still hides the taskbar icon's tooltip (with native, copy and region).

Thank you for your quick reply. I appreciate very much your program!

Bad news... on system reboot, "native" mode shows again the tooltip under the numbers.

That's not a big problem, I'll use "copy" mode
