memory use
Posted by lian - 2006/10/31 13:16

_____

Rainlenar 1 = 6 Mo
Rainlendar 2 = 10 Mo
Is it normal ? I find this new version very interesting but uses a little too much memory on my computer. I took a look at the FAQ but I wanted to know if there is some way to reduce this memory use.
Thank you for your great work :lol:

_____

Yes, sounds about right. The framework that I use for platform independence increases the memory usage somewhat (and there are couple of new features too in Rainlendar2 :-).
