
Rainlender Lite Tray Icon on Linux Mint 10

Posted by tecknomage - 2011/03/09 09:57

RE: Rainlendar Lite v2..8.1 b103 Linux 32bit

When I check Show tray icon most of the time it DOES show up in the Linux Mint Tray.

BUT occasionally it ends up on the desktop.

Unchecking then rechecking the option SOMETIMES fixes it.

Also cannot drag/drop to tray.

Does this happen only on startup or also when you change the option while Rainlendar is already running? On startup it can happen if the tray hasn't been initialized yet when Rainlendar sets the icon. You can work around the problem if you delay the startup e.g. with a script.
