
Toggle Dual Calendar

Posted by Tobert - 2011/03/12 08:38

I'd like to use the single left-click function of the tray-icon to toggle not all available windows, but only the specified one (in my case the Dual Calendar).

Now it's been said on the forums that you can achieve this by scripting.

Which file do i need to edit? Does the script have to be in the rainlendar/scripts folder or in the scripts folder inside the skin?

How would the edit look like?

Sorry i'm not experienced in scripting..

I'm using the normal shadow4 skin.

Create a file (e.g. hotkeysToggleWindow.lua) on the Rainlendar/scripts folder, and copy the code below. After that, go to the options dialog and change the action to this new hotkey.

```
function Hotkey_Toggle_One_Window()
  value = "Shadow4::Dual Calendar"
  if Rainlendar_IsWindowVisible(value) then
    Rainlendar_HideWindow(value)
  else
    Rainlendar_ShowWindow(value)
  end
end
```

This will work if you have only 1 Dual Calendar. If you have 2 or more, tell me and I will try to do a bigger code.

so awesome!

thank you very much

(had a little fight but then got it working with 'save without BOM')
