## Information only Option in events

Posted by trembru - 2011/03/13 16:37

---

An option to select whether or not to show an event in the events list would be useful. For example in recurring events that are for information only (no action required) where only a highlight on the calendar is required. This would prevent clutter in events list.

Save the event in another calendar. Then go to the Event List options dialog and choose to exclude that calendar.

Thanks for the suggestion, but I'd prefer not to have a second calendar on the desktop.

Or, set a category that the event belong, then exclude the category in the event list.
