
Dual calender does not show up although checked

Posted by eyebex - 2011/03/22 04:40

Hi,

I'm using Rainlendar 2.8.1 build 103 (64-bit) on Kubuntu 10.10 (64-bit). Rainlendar starts automatically with KDE as it restores the last session. For some reason, initially the "Dual Calender" is not shown although there is a checkmark in the "Windows" context menu. I need to uncheck and check it again to make the window appear. The "Events" and "Day View" windows show up correctly right from the start. The funny thing is, if I exit and restart Rainlendar manually, the Dual Calender shows up just fine at startup. So the issue only seems to happen if Rainlendar is restored as part of a KDE session.

I don't have KDE installation so I can't try this myself. If you refresh the calendar does that make the window visible? What about other windows like Calendar List or Day and Week Views? Do those work correctly?

Refreshing indeed makes the dual calender window visible. All other windows I've tested so far work correctly.

FYI, this issue is still present after doing a dist upgrade to Kubuntu 11.04 (using KDE SC 4.6).

I do not see this issue anymore with Rainlendar 2.9 and an up-to-date Kubuntu 11.04 :-)
