## Rainy - could you tell me what's fixed in 2.8.1?

---

Thanks for the new update. I wondered if you could let me know what's changed from the previous version, in Ubuntu? I couldn't find a list on the site. I was wondering if you'd had chance to look at the occasional respawning menu bar icon / "start another instance" bugs? The new version does seem to run more cleanly. Great work, again!
