
problem with Kubuntu (6.06) and rainlendar2

Posted by mathman - 2006/12/27 15:46

Hallo,

i have a problem to run rainlendar2 with Linux Kubuntu (6.06).
When I will start rainlendar, the terminal tell me

```
mkoenig@blechkiste:~/rainlendar2$ ./rainlendar2
X Error: BadDevice, invalid or uninitialized input device 169
Major opcode: 147
Minor opcode: 3
Resource id: 0x0
Failed to open device
X Error: BadDevice, invalid or uninitialized input device 169
Major opcode: 147
Minor opcode: 3
Resource id: 0x0
Failed to open device
```

How can I run rainlendar2?

The errors probably come from the x.org settings but I don't think they should prevent Rainlendar from starting. Are there any errors in the Rainlendar's log file (or does it even exist)?
