
Backup of network calendar when offline?

Posted by bigtasty - 2006/12/27 18:07

I am using iclax.com for my calendar and I was wondering is there anyway for rainlendar to save the ics and use the most recent downloaded file even if your not connected to the internet? Because this would be my only calendar and I would like to be able to look at it if icalx.com goes down or if I don't have Wifi.

Thanks a lot rainlendar is a great program.

This feature has been added to the build 30.
