## Email notification client software

Posted by mystvearn - 2011/03/28 14:42

---

Just wanted to suggest (wish) that an email notification client could be made. I really wouldn't mind paying for a rainmeter style pop peeper integrated with Rainlendar.

I already bought the pro version of rainlendar. Though not sure you have the time for it.

I am currently using pop peeper which works but not that aesthetically pleasing.

Email is not really related to calendars so it's unlikely that this will be added directly to Rainlendar. However if you can find a tool which allows you to write e.g. the email titles to a file you could use the Rainlendar's File window to display them (or create a custom addon for that).

I know, just suggesting :)

I'm bad at scripts. LOL.
