## Wrong/Missing items on Sidebar's todo list

Posted by Jorge\_Luis - 2011/03/28 22:58

---

I have the todo list and the event list above. When the todo list shows new items, the window goes below the event list and I need to move it everytime. Until I remember today the Sidebar window. But, to show only the two together, I added a `visible="0"` property on the calendar window (is this a good idea for an option? :dry: ).

After that, I notice that the buttons didn't appear. Finally, I found the problem: The todo list was updated (I don't know when), but not the "copy" in the Sidebar. It says:  
But `bitmap.todo.item` has 3 frames. This need to be a button to mark as completed, need action, etc.

True, the images should be buttons. I'll fix that.
