
Events highlight dimmed out-of-month days

Posted by GregDude - 2011/03/31 06:15

In Rainlendar, in month view, prev/next month days are shown dimmed out. However if events are on those days, they are fully highlighted.

This can be a bit confusing, mostly when trying to add an event to, for example 'the first Monday of the month' or 'last Friday'. Sure it can be avoided by paying closer attention, but good interfaces can help the user.

Using 'shadow 4' skin on Version 2.8 (b100) 64bit. On Windows 7.
