## Tab steps in event window inputs are confusing

Posted by observer - 2011/04/10 13:12

---

Hi,

under Mac OS X 10.6.7, rainlendar (2.8.1 b103) shows a weird behavior when I attempt to step through the input boxes by using the `tab` key, or the `tab +` combination, respectively (which is my preferred way of going through forms).

On my computer, `tab +` will not bring me back step-by-step to the uppermost input element, but will only jump backwards one time (or twice) and when pressing `tab +` another time, it jumps forward again. I am not used to this from other applications - say, for instance - the address book in edit mode - and I would appreciate if this could undergo further inspection. Might just be a little issue in the code?

Thanks a lot in advance.

Edit: Same issue with the windows for adding / editing a ToDo item.

Seems that the `shift+tab` doesn't work correctly in the location field. This works fine in Windows and Linux versions so the problem probably is in the framework. I'll see if there is anything I can do about it.
