
[Solved] How to show \'Snooze Items\' ?

Posted by anoob - 2011/04/11 13:20

For example:

At the 'Alarm' window, i set event A to snooze 10 min, event B to snooze 15 min, ...etc.

If on 5 min after, i want to recall the 'Alarm' window to see all snooze items, HOW CAN I DO?(use lua)

Re: How to show \'Snooze Items\' ?

The snooze times are written to the rainlendar2.ini file into the section so you would have to somehow clear that and refresh the calendar.

Thanks,
It's my code:

```
function Hotkey_Wake_Snooze_Item()
  contents = Rainlendar_ReadFile("D:\\Sharware\\Desktop\\Rainlendar2\\rainlendar2.ini")
  _, _, allsnoozeitems = contents:find("%(-)%")
```

a) If section is on the bottom of file, this code can not work.

HOW DO I FIX IT ?

b) Are there built-in variables that can get the path of rainlendar2 ? like: #INI_PATH#

anoob, I think this could help you (but not too much):

```
-- GET ALL THE UIDs
arrayUIDs = Rainlendar_ListAllComponents()
size = table.getn(arrayUIDs)
for i = 1, size do
  -- CHECK EACH ONE IF HAS A SNOOZE TIME
  value = Rainlendar_GetOption("AlarmSnoozeTimes", arrayUIDs)
  if (value ~= "") then
    -- IF HAS A SNOOZE TIME THEN
    -- HERE YOU DELETE THE TIME
  end
end
```

This works fast is you have few tasks and events. But if you have too much (I don't know how much) maybe this could be slow.

Thanks, Jorge_Luis
your code is better.
