New event always is created with multiple alarms

Posted by JSimR - 2011/04/12 13:05

_____

Rainlendar Pro v2.9(b104) 64 bit
Ubuntu 10.04

I have defined an event template with one alarm.
But when I restart the application and it creates a new event, this is created with several alarms! :(
http://img849.imageshack.us/img849/3559/captura20110412191919.png

If I define the template with one alarm again, it works well, but in the next restart the problem appears again.

_____

This bug should be fixed in the next build.
