## Rainlendar regularly crashes in Ubuntu Natty 11.04

Posted by jonolumb - 2011/04/14 06:16

---

Since upgrading from Ubuntu 10.10 to Ubuntu 11.04, Rainlendar has been crashing quite frequently. I have no problems when I open up the calendar to begin with - but it usually crashes within 5-10 minutes of having been opened.

I have attached the backtrace and log for reference.

Thanks <http://www.rainlendar.net/cms/images/fbfiles/files/backtrace.txt>

The backtrace just shows the normal event loop so nothing there which would help to locate the crash. I installed the latest daily build of 11.04 but haven't been able to make Rainlendar crash so far. Are you using the new Unity desktop? If yes, can you try if the crashing happens also with the "Ubuntu Classic" session?

---

Hi Rainy

I am indeed using the new Unity desktop in 11.04. However, I logged into an "Ubuntu Classic" session and ran the debugger again on rainlendar - and once again it crashed. It would seem then that something other than Unity is causing this bug.

I've attached another backtrace. [http://www.rainlendar.net/cms/images/fbfiles/files/backtrace\\_classic.txt](http://www.rainlendar.net/cms/images/fbfiles/files/backtrace_classic.txt)

I've further attached an apport crash report generated automatically which may or may not be useful...

Can you contact me via the Rainlendar's support email? Since I cannot reproduce the problem myself I can create debug build for you which hopefully gives some more details about the crash.

Hello Rainy,

I use also Natty 11.04. (64-bit) and Rainlendar 2.8.1.

At my desktop Rainlendar works fine and I have no problems, but I see always white triangles. How can I delete them?

<http://home.arcor.de/messdiener.sankt-clemens/rainlendar.png>

Thanks!  
MaAnKo

Mine is no longer crashing either - it was probably some buggy package in the Beta because everything seems to run fine in the final release. I too am seeing the "resize" triangles on the edge of windows - not sure how to get ride of them though... I think it's part of the Unity desktop rather than a Rainlendar feature - but I may be wrong.

Rainy answered about the Resize triangle in another post. Its a GTK+ problem:

[http://www.rainlendar.net/cms/index.php?option=com\\_kunena&Itemid=42&func=view&catid=4&id=15138#15138](http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=4&id=15138#15138)

I found a workaround for the resize grips so they shouldn't be visible anymore in the next build.
