## Different types of display for same events

Posted by mystvearn - 2011/04/18 09:26

---

I'm using the pro 64bit version on my desktop and laptop which syncs to Google Calendar. I noticed that for an event which has more than one day on my desktop, it says "event (10 days)"

On my laptop it shows the same event repeated for the set number of days making the info displayed longer. Is there a way to streamline the display on both calendars?

The setting you are looking for is Options->Advanced->"Group multiday events".
