
On KDE SC 4.6, resize handles are shown

Posted by eyebex - 2011/04/29 04:34

Hi,

I'm on Kubuntu 11.04 ("Natty"), 64-bit, which uses KDE SC 4.6. Since the dist upgrade from 10.10 (which used KDE SC 4.5, I believe) I see resize handles in all Rainlendar windows and tooltips, see the attached screenshot. I guess you need to call some new API to disable them / make them fully transparent?

That is caused by a bug in GTK: <https://bugs.launchpad.net/ubuntu/+source/gtk+2.0/+bug/704105>
