## Installation warning: Package of bad quality

Posted by Stef - 2011/05/01 05:44

---

Hi there,

this is kind of an fyi post. I'm posting in this section because I don't consider this a bug and I'm not sure where else to put it. Feel free to move the thread to a different section as you see fit.

When installing Rainlendar on Natty (Ubuntu 11.04), I got an installation warning that the package was of bad quality (see attached screenshot). The text says: "The package doesn't provide a valid Installed-Size control field. See Debian Policy 5.6.20."

I don't think this is a major issue, but it might keep people from installing rainlendar.

I'll fix that in the next build.
