## Virus Warning with 2.0.2 Pro (Win) ?

Posted by Cesideem - 2007/01/01 12:44

---

Hi,  
I just wanted to download the new Version (2.0.2) an after finishing, i got an virus alert:

->  
Thread:  
NewHeur\_PE Virus possible unknown virus.

I think, there is no virus in this official file, but I want to inform you about this message.

(Virusscanner: NOD32 by eset)

Yes, NOD32 seems to think the installer has a virus. I have not received any reports for other antivirus applications nor have I found any virus from my system so it's most likely just a false alarm.

I got this warning too, even with the latest version of NOD32. Are you sure there is no virus? I hope they remove this false positive soon, I get the warning every few hours from NOD32. :unsure:

There is no more problem with virus warning. I've just downloaded 2.0.2 lite and everything is ok. My NOD virus definitions are 1955.

hello!  
I have NOD free v. 2.5, definitions n.1865 and started getting the message just now :(

c:\program files\rainlendar2\rainlendar2.exe - NewHeur\_PE virus probabilmente sconosciuto

(transl: virus probably unknown)

---

anyone else?

Isn't the version 1865 of the definition file rather old already?

yep!! nod32 kepted saying it was all upgraded! but now I checked and it's at version 2094!  
false alarm :)
