
Email received leads to wrong Ver

Posted by Ocala2 - 2007/01/01 15:07

When I opened my email from you that talks about the latest version 2.0.2, and i go to the lite download on the right, I get one with tar.tar extension and then error messages as per attached pics. I had to go to the top download to get the Windows version.

The *.tar.bz2 is the Linux version. You need to click the Windows logo to get the Windows version.
