## Rainlendar crash

Posted by burz03 - 2011/06/18 04:37

---

Hi!

Since I installed the latest Microsoft Updates 3 days ago Rainlendar crashes everytime it tries to sync with my google calendar. Does anyone have similar problems?

My system:

Windows 7 professional 64 bit

Rainlendar2 Pro 2.8.1 64bit

I tried reinstalling Rainlendar (I saved only the rainlendar.ini file...)

Today I also tried the latest beta version 2.9b106 64 bit, but it still crashes everytime.

Can anyone help me?

You can find the crash dump file here:

Crash dump

The crash seems to happen when the alarm should play the sound file. Have you updated your sound drivers? Does it work if you disable the alarm in Rainlendar (i.e. suppress the alarm for the calendar in Options->Calendars).

No I haven't done anything with the sound drivers. I installed the Microsoft security updates for windows, office, .... But your recommendation works. When I check the 'Ignore Alarms' option, Rainlendar doesn't crash during the sync process.

Thanks for helping me so quickly.
