## \\"Rainlendar 2 has stopped working\"

Posted by Loggy - 2011/06/18 05:35

---

This error message popped up on my desktop last night. Ever since, every time I try to run Rainlendar2, the same error will appear and rainlendar will close itself down. I've tried running debug so I could provide more information but the exact same error message appears when I attempt to run that :(  
Is there any sort of fix I can attempt? Or am I resigned to reinstalling? My desktop looks quite bleak with all this empty space on it :(

I would need the crash dump file to know what happens. What you can try is to reset your settings by renaming the rainlendar2.ini file in the settings folder and see if that helps.
