
Very slow performance

Posted by vygandas - 2007/01/03 05:08

My pc is AMD 2800+, 512 RAM, and Geforce FX5200 64mb.

And Rainlendar is acting very slowly.

Whenever I change the month or do anything at all (like inserting new event), the fonts of half of my screen change their appearance every 0.5 seconds and the program is freezed up for that period. With some skins it takes forever, with some - "only" 5 seconds.

The fonts change their appearance from normal to "smooth edges", every 0.5 seconds... what a heck is going on?

It was an issue with ClearType.

Update to the latest version 2.0.2.

Thank you! It works like a charm now. Rainlendar is my favorite calendar and I wouldn't want to part with it. Nice job, guys.
