
Rainlendar 2.9 BETA build 108

Posted by Rainy - 2011/07/02 08:07

Build 108 can be downloaded from here:

Windows (32-bit): Rainlendar-2.9.b108-32bit.zip
Windows (64-bit): Rainlendar-2.9.b108-64bit.zip
Linux TAR (32-bit): Rainlendar-2.9.b108-i386.tar.bz2
Linux DEB (32-bit): rainlendar2-pro_2.9.b108-1_i386.deb
Linux TAR (64-bit): Rainlendar-2.9.b108-amd64.tar.bz2
Linux DEB (64-bit): rainlendar2-pro_2.9.b108-1_amd64.deb
Mac OS X (Intel): Rainlendar-2.9.b108.dmg

MD5SUMS-b108

Skin addons

The language addon has been integrated into the widget addon and to the Shadow4 skin. The updated widget addon can be downloaded from here: Shadow4-Widgets.r2skin-addon

Localization

The updated (not final) template file can be downloaded from here: rainlendar2.pot

This is beta version! It has not been tested.

Changes:

- o Smartly hidden windows got broken in the previous build and didn't appear anymore.
- o Setting the standard tooltips for the window brought it to front on redraw. This mainly affected the to do list window.
- o Alarm didn't make the timezone adjustment for all day events so they could be shown for incorrect day.
- o Restoring the settings from a backup file on startup didn't actually use the backed up settings.
- o Set predefined polling values for Google Calendar and Remember the Milk so that the server doesn't get flooded if you poll it too often.
- o New events were written to the offline copy too late which could cause event and task duplication.
- o Added "subtaskindent" for xml format skins which defines the indent for sub tasks.
- o The last read time is adjusted to match the server's if your local time is in the future so that polling for changes doesn't miss anything.

Hi Rainy,

thanks für releasing the new beta that soon!

The bug with the not-shown tooltips is still present.

That means, there is no updated german language pack that fixes it?

Re: Rainlendar 2.9 BETA build 108

The Spanish beta language file has been updated in the Languages section.

Now, Alarm window can display task's work-time(like "14:00 - 15:00 task1"),

but if i unchecked "Show alarm start time", it did not display "15:00 task1", only display "task1".

o Alarm didn't make the timezone adjustment for all day events so they could be shown for incorrect day. But the error still exist.(see "event 01")

Event: event 01
Start time: 07/07/2011 All day event
Alarm: 5 Days before the event starts
Repeat every 1 weeks

I downloaded the latest version of Rainlendar and the widgets, but I can't get the widgets to show up in the list. After installing the widgets, it said they were installed, but they don't load(unavailable in the list on the left).

How do I get them to work? What am I doing wrong?

Thanks,
Grouch

The bug with the not-shown tooltips is still present.
The German language didn't get updated into the build for some reason. I'll have to check why.

But the error still exist.(see "event 01")
That's actually caused by a different problem. I'll fix it.

I downloaded the latest version of Rainlendar and the widgets, but I can't get the widgets to show up in the list. After installing the widgets, it said they were installed, but they don't load(unavailable in the list on the left). It could be a timestamp issue with the files. Can you check what the timestamps in the skin files are in C:\Program Files\Rainlendar2\Skins and C:\Users\...\rainlendar2\Skins (note that the paths depend on your operating system)?

Fell back to the previous release and then re-installed 108 and all got well. Timestamps now are all current.

Thanks,
Grouch

Every few start-ups I get the following message:

<http://www.iso80.de/misc/rainlendar.png>

What is meant by this?

Re:Rainlendar 2.9 BETA build 108

Posted by Rainy - 2011/07/04 04:30

What is meant by this?

Can you send me (use the support email address) the Rainlendar's debug log when this happens?

=====

Re:Rainlendar 2.9 BETA build 108

Posted by Loom - 2011/07/04 13:51

Is the normal log sufficient, or do I have to use the debug mode until it happens ?

=====

Hi,

I have an Apple Dev Account and therefore am running the GM of OS X 10.7 Lion.

There Rainlendar has problems with the dates overview (and possible other windows) that it stretches them out of proportion when you move them and even when you don't it suddenly stretches them from one moment to the other :(<http://img829.imageshack.us/img829/9978/rainlendar.th.png>

Ran into this with beta 105 and also 108.

Previously on OS X 10.6 and beta 105 no problem there.

=====

Posted by evanade - 2011/07/08 06:07

I find a loss string in .pot file.
"Movie" in category.

And where "Show no icons" appears?
THX!

I just updated to the latests beta (108) and now on my google calendars I cant edit exiting events. a box comes up saying "This is a read only event. It's not possible to edit this event with rainlendar."

in previous versions I have been able to edit these same events without any problems. All the calendars DO NOT HAVE READ Only ticked

=====

Change your login from

name@googlemail.com

to

name@gmail.com

Worked for me!

crazybee, can you send the Rainlendar's debug log to the support address and I'll check what's causing it?

Got the same problem here.

At home i will try to figure out, how to send this bugreport.
