
What use is scripting?

Posted by andygrunt - 2007/01/04 05:02

Hi,

I know scripting is on the cards for a future version but I can't imagine what it would be used for. Could someone give some examples of some useful/fun things that could be done when scripting appears?

Thanks.

My guess is going to be windows with added functionality. I would think it might be possible to run external programs, thus allowing for an application bar. Stickit notes I would think could be created with it, allowing Rainy to work on the calendar. A skin/category editor might be possible, or it could require the plugin api.

I can't say for sure because I don't know how it will be implemented or how it is used.

Thanks - I guess we'll have to wait and see :)
