
Mac / Rainlendar2-lite : empty desktop

Posted by samuri_penguin - 2011/07/14 04:30

(Mac Leopard / rainlendar2-lite)

I've just unchecked to hide some windows (just like calendar month, list, etc) but I was in a hurry until I didn't check at least one. So, now everything's gone from my desktop. I try to open preference and find backup data but can't find the way to bring it back to my normal desktop. Can someone help me, please?

If you have a tray icon:

Right click -> Options -> Skins -> Advanced >>> -> Select any window in active skins -> Settings... -> Window settings -> Visible -> CHECK.

Or if you don't:

http://www.rainlendar.net/cms/index.php?option=com_kunena&Itemid=42&func=view&catid=3&id=15053#15059
