## \ "Keep offline copy\" not working with Google Cal

Posted by kenoodle - 2011/07/14 14:50

---

Mac OS 10, Rainlendar Version 2.9 (b106) 32 bit (Build on May 15 2011).

Rainlendar works very nicely with Google calendar but only when "Keep offline copy" is NOT selected. When "Keep offline copy" is selected, no events are displayed when online or offline. Is there something else I need to check or ?

You should upgrade to the latest beta.

I just installed beta build 108 and it's working perfectly with Google calendar and "Keep offline copy" selected. Thank you!

Thanks, just wanted to open the same topic: Using b106 currently and now I try to upgrade to the latest version b110. Hopefully that fixes it :)

Edit: Seems to be fixed (: (: (:
