## Rainlendar 2.9 BETA build 109

Posted by Rainy - 2011/07/18 06:43

---

Build 109 can be downloaded from here:

Windows (32-bit): Rainlendar-2.9.b109-32bit.zip  
Windows (64-bit): Rainlendar-2.9.b109-64bit.zip  
Linux TAR (32-bit): Rainlendar-2.9.b109-i386.tar.bz2  
Linux DEB (32-bit): rainlendar2-pro\_2.9.b109-1\_i386.deb  
Linux TAR (64-bit): Rainlendar-2.9.b109-amd64.tar.bz2  
Linux DEB (64-bit): rainlendar2-pro\_2.9.b109-1\_amd64.deb  
Mac OS X (Intel): Rainlendar-2.9.b109.dmg

MD5SUMS-b109

Skin addons

The language addon has been integrated into the widget addon and to the Shadow4 skin. The updated widget addon can be downloaded from here: Shadow4-Widgets.r2skin-addon

Localization

The updated (not final) template file can be downloaded from here: rainlendar2.pot

This is beta version! It has not been tested.

Changes:

- o The alarm for weekly recurring all day events was shown on incorrect day.
- o Fixed the problem with the invalid max-results error which was shown sometimes for Google calendars.
- o Variable type works now with global variables too.
- o Deleting a task will delete its subtasks as well.
- o Changes to the Window size handling on Mac to make things work better on Lion.
- o Error dialog shows the same error only once.
- o Changed the "Change month" submenu to "Change day" for windows which contain a schedule view.
- o The quickadd supports simple recurrence patterns now too use "every N days/weeks/months/years" + "for N times".
- o Alarm dismiss state is written for all events at once instead one at a time like previously.
- o Writing Google events caused the upload thread to hang if the request was redirected to some other url.
- o Tooltip showed incorrect date for events which span over multiple days.

o Deleting a task will delete its sub-tasks as well.  
Is mean that the sub-tasks will also be deleted ?

But, I do the same action (deleting a task that has sub-tasks) in b107, b108, b109, and got the same results (sub-tasks still exists)

---

## Re:Rainlendar 2.9 BETA build 109

No longer massive distortions on Lion as with previous versions.

---

Thnaks

Currently that works only if you delete the task from the context menu. If you delete it from the todo dialog or from the manager the subtasks are not deleted (I probably should fix this...).

When i try to import my two google calendars from the same googleaccount, into the new version. The programm stops working under windows 7 32bit.

Can you provide a crash dump for this?

Hi - great software!

I have having problems with the last few beta versions and Google Calendar. I can quite happily enter new events using Rainlendar, but then if I double click on an event, I get the message "This is a read only event. It's not possible to edit this event with Rainlendar."

This doesn't happen for Tasks synchronised with Google, only Events. I have checked all my Google account settings, and they are not read-only events.

Also, another weird things is this only happens on Windows 7 (tried on 2 PCs - one 32-bit and one 64-bit version). On Windows XP, it is fine and I can edit events from Rainlendar.

Any suggestions?

Cheers,  
SMD.

Actually, forget that comment about XP. It doesn't work on XP either. Same problem on all Windows versions. Any ideas??

Hi,

I am suffering from the same problem. I investigated it a bit and found out that it only seems to occur with google calendars that are not the default google calendar.

I hope the problem will be fixed in one of the next beta releases, as rainlendar is quite useless for me without working google calendar read+write support.

But all in all, thanks for the great program, rainy!

mfs.

I have the "read-only" problem when I create a calendar entry in Jorte (an Android calendar app). While I can access this entry with the web-site from Google-Calendar, it's flagged as "read-only" in Rainlendar.

Is there a reason to why the Category for Events and Todos show the date number? This seems to have also broken the auto-fill when typing the category. For example, I use the Business category A LOT, and usually typing "bus" does the trick.

It shows how the event will look in the calendar. You can switch back to the old category selector from Options->Advanced->Allow multiple categories.

(Those who are wondering this feature is not yet available in b109.)

Ah right. I just couldn't figure it out. Though if you can get the auto complete to work that would be awesome!

Maybe this might be something to look into as well, but the date in the category stays the same until you restart Rainlendar. It will use the date of the day it first started. So for instance today is the 27th, so it will always stay 27 in the category, even after the next day.

---

Autocomplete is probably doable. I'll check that. Currently the category images are created only once and cached for performance reasons which is the reason the day doesn't change unless you refresh the calendar.

After upgrading to this beta I have been having problems adding Google calendars and task lists to Rainlendar. After filling in the email and password forms and clicking "Select Calendar" I am met with the following error:

"Google Error (Dummy)!  
Unable to download the task lists.  
Server returned result: (0) 403 Forbidden.  
aliy Limit Exceeded"

However if I keep hammering at their server I sooner or later find success. I do have the two step authentication set up on my Google account requiring me to get an application-specific password if that might relate to the issue.

Hope this helps in some way. Thanks for all your hard work Rainy!

~infinityvoid~

The error means that the quota reserved for Rainlendar has been exceeded. I've requested more quota from Google but no word yet...

I've test this beta in vmware with win 7 64 bit and the 64 bit rainlendar.

With google i've encountered that creating event in rainlendar can reset the reminders on other events.

Used a google account with empty calendar and managed to reset reminders to just pop up window. This does not always happen, but once is enough.

Is this a known error?

edit. Maybe somewhere in the settings, but the pop up alarm window appears for events that finished a week ago

The alarm will be changed for events if they are modified in Rainlendar (this includes also dismissing an alarm). You can change the way Rainlendar handles the Google event alarms from the calendar's settings (Options->Calendars). You also need to dismiss all alarms in Rainlendar even if you have already done it in Google's website since there is no way to read the dismiss state from the Google's event.
