## Ability to see yesterday's events in Events Window

Posted by Murt - 2007/01/04 11:13

---

Folks,

I was using an older version of Rainlendar and I had the ability to specify show events for Yesterday, Today, and Tomorrow in the Events window. I like the ability to still see Yesterdays events in case they are not all done.

I can't find that in the new version and I was not sure if that was a 'skin' option? If anyone knows how to do it, or a skin that supports it, please let me know.

Best regards!

John

I don't remember that it was possible with the old version either. But I can add it to my todo list.
